Open Source Security Recommendations

- Always keep up to date with all upstream programs
 - Insist on stable upstream program releases

Open Source Security Recommendations

- All programs / devices must always be update-able in the field
 - If not, they are instantly insecure and obsolete

Open Source Security Recommendations

- Continuously test all updates and releases
 - Testing plan must be in place from very beginning

Open Source Security Recommendations

- Do NOT rely on CVE/NVM notices
 - Can be used as a nice hint

Open Source Security Recommendations

- Always report problems found to upstream developers
 - A bug is a bug is a bug
